

Insights Extracted From DataVisualization

1- This question in our survey is about Food Regime

```
In [4]: labels = df['Food Regime'].value_counts().index # Taking the all index  
values = df['Food Regime'].value_counts().values # Taking the all value  
  
colors = sns.color_palette('pastel')  
  
plt.pie(values, labels = labels , colors = colors )  
plt.title('Chart title')  
  
plt.show()
```

- We Conclude that many People eats Meatarian Food .So, We must add more meatarian food in our menu .
- In the second place comes (All of the above region) .So, We may add other types of foods.

2- This question in our survey is about Diet of our population

```
In [5]: labels = df['Diet'].value_counts().index
        values = df['Diet'].value_counts().values

        plt.pie(values, labels = labels , colors = colors)
        plt.title('Chart title')

        plt.show()
```

- From this question , we conclude that most of people do not like healthy food
- So we need to add many of fast food

3- This question in our survey is about Spicy Food

```
In [6]: labels = df['SpicyFood'].value_counts().index
        values = df['SpicyFood'].value_counts().values

        plt.pie(values, labels = labels , colors = colors)
        plt.title('Chart title')

        plt.show()
```

- From this question , we conclude that most of people like Spicy food

- So we need to add many of Spicy food

4- This question in our survey is about Eating Vegetables/Fruits

```
In [7]: labels = df['EatingVarious_Vegetables/Fruits'].value_counts().index
values = df['EatingVarious_Vegetables/Fruits'].value_counts().values

plt.pie(values, labels = labels , colors = colors)
plt.title('Chart title')

plt.show()
```

- From this question , we conclude that most of people like Vegetables/Fruits
- So we need to add Vegetables/Fruits as additions

5- This question in our survey is about drinks with eat

```
In [8]: labels = df['Preferred_Drink'].value_counts().index
values = df['Preferred_Drink'].value_counts().values
plt.figure(figsize=(15,10))
sns.barplot(labels,values)
```

C:\Users\MARIAM\anaconda3\lib\site-packages\seaborn_decorators.py:36: Future Warning: Pass the following variables as keyword args: x, y. From version 0.12, the only valid positional argument will be `data`, and passing other arguments without an explicit keyword will result in an error or misinterpretation.

```
warnings.warn(
```

- From this question , we conclude that most of people like Cold Drinks With Food
- So we need to add Cold Drinks in menu as additions

6- This question in our survey is about amount of salt that people like in food

```
In [9]: labels = df['Salt_Amount'].value_counts().index
        values = df['Salt_Amount'].value_counts().values

        plt.pie(values, labels = labels ,colors= colors)
        plt.title('Chart title')

        plt.show()
```

- We conclude that a lot of people like medium salt in food
- In second region comes little salt

7- This question in our survey is about How do you preferred your food

```
In [10]: labels = df['LovingFood'].value_counts().index
         values = df['LovingFood'].value_counts().values
         plt.pie(values, labels = labels,colors= colors )
         plt.title('Chart title')

         plt.show()
```

- We conclude that almost people prefer well done food

8- This question in our survey is about Education Level

```
In [11]: plt.figure(figsize=(10,10))

labels = df['Education'].value_counts().index
values = df['Education'].value_counts().values
sns.barplot(labels,values)
```

C:\Users\MARIAM\anaconda3\lib\site-packages\seaborn_decorators.py:36: Future Warning: Pass the following variables as keyword args: x, y. From version 0.12, the only valid positional argument will be `data`, and passing other arguments without an explicit keyword will result in an error or misinterpretation.

Out[11]: <AxesSubplot:>

- We conclude that most of our population are students

9- This question in our survey is about what meal you preferred to eat in your day

```
In [12]: x = df["Preferred_Meal_Aday"]
plt.plot(x)
plt.title("Distribution of Preferred Meal a day")
plt.xlabel("Preferred Meal A day")
plt.show()
```

- We conclude that most people like eating three meals a day
- So, We will add many different types of food for (Breakfast, Lunch and Dinner) and add snacks as additions

10- This question in our survey is about Age of our population and there diet

```
In [14]: sns.relplot(data=df, x="Age", y="Diet", kind="line")
```

```
Out[14]: <seaborn.axisgrid.FacetGrid at 0x28ecfab2f70>
```

- We conclude that people in age 20-25 there diet is non healthy , and people 31-35 there diet is healthy
